

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

killed in May, 1908. Efforts were made at the time to obtain further details in regard to the capture of the specimens but without success. Since the appearance of the note a letter has been received from Mr. B. D. Sheffield, of Moran, Wyoming, the owner of the birds, who states that they were killed on April 20, 1907. He adds that there were but two of these ducks which appeared during the latter part of March and were seen every day as they stayed on Snake River in front of the Lodge just below the outlet of Jackson Lake. He has never seen any since. In view of the rarity of the Harlequin Duck in this part of its range, it seems desirable to correct the supposed date and to place on record the exact date of capture — T. S. PALMER, *Washington, D. C.*

**White Ibis** (*Guara alba*) in Missouri.— On July 10, 1910, two White Ibises were killed at Old Monroe, Mo., a town in Lincoln County, fifty-two miles north of St. Louis, by a well known St. Louis banker. The two birds taken were in adult plumage out of a flock of about one hundred. The birds were mounted by Mr. J. Kirk Keller, a St. Louis taxidermist, and one of the specimens now adorns the "Old Monroe Club."

This I believe is the first record of the White Ibis in Missouri. Mr. Otto Widmann, in his book 'A Preliminary Catalog of the Birds of Missouri,' states that two specimens in immature plumage were killed near Quincy, Ill., but gives no instance of the bird being identified in Missouri.— H. C. WILLIAMS, *St. Louis, Mo.*

**Glossy Ibis** (*Plegadis autumnalis*) in Eastern Cuba; a New Record.— On January 25, 1913, I took an adult male of *Plegadis autumnalis* (Linn.) in winter plumage in the lagoon at 'Manati' on Guantanamo Bay, Oriente Province, Cuba. There were a pair of this Ibis feeding together with Little Blue, Louisiana, and Great Blue Herons, on small fish, in a nearly dry puddle of the lagoon.

This is the first record for Eastern Cuba for this species; the only other records for Cuba are those of Dr. Gundlach from 'La Cienaga de Zapata' and a lagoon (unnamed) near Cardenas, in Matanzas Province.

I had seen a specimen some five years ago flying over the bay near 'Manati,' but was unable to secure it; since then none have been seen till this year.— CHAS. T. RAMSDEN, *Guantanamo, Cuba.*

**Bittern Breeding in New Jersey.**— To the few breeding records of the Bittern (*Botaurus lentiginosus*) in New Jersey, I desire to add two more. A set of four far incubated eggs is now in my collection, taken near the coast in Atlantic County on June 11, 1911, and on June 29, 1912, I examined a nest of this bird containing four full fledged young. It was placed flat on the ground, poorly concealed and was built of a mass of reeds and sedges.— RICHARD C. HARLOW, *State College, Penna.*
